

# DO IT YOURSELF

Starting point: a 100ml e-liquid mix.

To make your own e-liquid, you don't need much — only 3 ingredients: aroma, base, and boosters. You start with an empty bottle that can hold at least 100ml of liquid.

## STEP 1 : NICOTINE BOOSTER *(if you don't want nicotine, skip step 1)*

If you want to vape with nicotine, you need nicotine boosters. A nicotine booster contains 20mg of nicotine. There are two types of nicotine :

- A Regular Nicotine Booster (20mg)**  
*This is freebase nicotine. It provides a stronger throat hit – you can clearly “feel” it.*
- B NicSalt Nicotine Booster (20mg)**  
*This is a smoother form of nicotine. It is widely used in disposable vapes such as SKE Crystal and in e-liquid brands like Drifter and E-Intense.*

Each **10ml nicotine booster** you add to the empty 100ml bottle increases the nicotine level in the bottle by **+2mg**.

<i>Amount of nicotine booster in the 100ml bottle...</i>	<i>...then the nicotine level in the 100ml bottle will be</i>
10ml.	2mg
20ml.	4mg
<b>30ml.</b>	<b>6mg*</b>
40ml.	8mg
50ml.	10mg
60ml.	12mg
70ml.	14mg
80ml.	16mg
90ml.	18mg
100ml.	20mg

\* If you want to vape with **6mg** nicotine? Add **30ml** booster to the 100ml bottle.

## STEP 2 : ADD THE AROMA

On the aroma bottle and/or on the website, you will find the recommended mixing percentage. This usually ranges between 5% and 20%, depending on the brand and/or flavor.

For example: if the mixing percentage of your aroma is 7%  
add 7ml of aroma to the 100ml bottle.

For example: if the mixing percentage of your aroma is 15%  
add 15ml of aroma to the 100ml bottle.

## STEP 3 : FILL UP WITH BASE

You have now added both the nicotine booster and the aroma to the bottle. Fill the bottle up with base until it reaches 100ml.

You're all set. Shake, shake, shake — and you're ready to vape right away!

*The flavor of your freshly mixed bottle will improve if you let it “steep” for 1 to 2 weeks. This means storing it in a dark cupboard — and maybe saying something nice to it every now and then 😊 After 1 to 2 weeks, the flavor will be noticeably better!*

### AROMA 24ml in 120ml

Some aromas are supplied in a 120ml bottle containing 24ml of aroma (for example brands like Drifter, IVG and LIQUA), or in a 60ml bottle containing 10ml of aroma (AISU). In that case, you no longer need to calculate how much aroma to add. You only need to add base and/or a nicotine booster to the bottle. Simply follow the steps described above.

## WHERE CAN I FIND AROMAS?

Check out our shop to explore the possibilities – there's more available than you might think!
